

Summary of Contents

Preface	xxiii
1 Introduction	1
I Words	
2 Regular Expressions and Automata	17
3 Words & Transducers	45
4 N-grams	83
5 Part-of-Speech Tagging	123
6 Hidden Markov and Maximum Entropy Models	173
II Speech	
7 Phonetics	215
8 Speech Synthesis	249
9 Automatic Speech Recognition	287
10 Speech Recognition: Advanced Topics	337
11 Computational Phonology	365
III Syntax	
12 Formal Grammars of English	389
13 Parsing with Context-Free Grammars	431
14 Statistical Parsing	465
15 Features and Unification	495
16 Language and Complexity	537
IV Semantics and Pragmatics	
17 Representing Meaning	553
18 Computational Semantics	593
19 Lexical Semantics	627
20 Computational Lexical Semantics	653
21 Computational Discourse	697
V Applications	
22 Information Extraction	741
23 Question Answering and Summarization	783
24 Dialogue and Conversational Agents	829
25 Machine Translation	879
Bibliography	929
Index	981
